Current State: Fragmented Visibility

Costly legacy solutions and manual processes offer incomplete connectivity across supply chain partners, blocking advanced visibility into global freight flows.
Future State: Global, Multimodal Connectivity

Supply chain leaders are looking for ways to build a fully integrated supply chain, connecting all modes and nodes including ocean carriage, drayage, deconsolidation, inland transportation, and final mile.
The Time Is Now

Market tailwinds are creating an urgency to implement logistics technology.

Companies like Amazon and Uber are forcing market to rethink strategy to delivery superior customer experience and improve operations.

$24.6B

Projected to be invested in connected supply chain software by 2023

400K

Logistics employees performing manual tasks that can be performed by an API or modern connection
What is Advanced Visibility Technology?

- Delivers Accurate & Predictive Shipment Tracking
- Network Reaches All Modes & Geographies
- Powered by High-Quality Data
- End-to-End Visibility & Process Automation
- Fast Time-to-Visibility & Exceptional Customer Support
$250,000 per year saved in labor costs

"project44 and FedEx’s API Integration Program helped our team significantly increase efficiency and reduce the number of manual outbound phone calls by 700-900 per day. That means less time tracking down rates, scheduling pick ups or tracking shipments and more time focused on improving our business and serving our customers."

Thomas Griffin
President, DLS Worldwide
"It was important we find a tool that would be easy to implement and would allow for long-term configurability. project44 gave us everything we were looking for and has proven to be an easy-to-use tool that has significantly increased the efficiency of our teams."

Keegan McCready
Sr. Project Manager, Global Operations, PMO
"With project44, we take a step closer to providing a more visible and reliable port-to-door ecosystem. We can seamlessly and instantly connect transportation data from railroad networks, yards, intermodal terminals, and maritime ports into a single transportation management workflow."

Jennifer Schopfer  
Vice President and General Manager of GE Transportation Transport Logistics
"To meet the strict delivery deadlines, we need to have real-time visibility into every single SKU and box in our supply chain. project44 enables us to collect extensive information from disparate parts of our transportation network including shipments in pre and post-transit stages. We automatically marry that data with our inventory databases to provide one single big picture view of everything that matters across our entire supply chain."

Elaine Singleton
VP, Supply Chain at Technicolor
About project44

project44 connects, tracks, automates, and provides visibility into key logistics processes to accelerate insights and shorten the time it takes to turn those insights into actions.

520% YOY booking growth

175K international carriers networked

500+ ELD integrations

1 sec Majority of data updated and standardized
